

Lunamunt

Whitepaper Lunamunt

Introduction

Lunamunt is a token with a hyper deflationary mechanism aimed at reducing the supply of Luna Classic, thereby restoring confidence in the crypto space. Our community comprises dedicated individuals who aim to reward our holders and establish an ecosystem that supports the burn of Luna Classic.

All our utilities have been designed to complement our goal of reducing the supply of Luna Classic.

Our core team, as well as @Lunc_community supporting the project, are committed to establishing a safe and transparent investment environment. In a world where integrity and commitment are hard to come by, Lunamunt serves as a testament to the collective potential of like-minded individuals. It can serve as a catalyst for inspiring other initiatives to help reduce the supply of Luna Classic.

Investing in Lunatics is a mutually beneficial proposition. Holders stand to earn LUNC while contributing to the burn of Luna Classic.

Additionally, they can potentially make gains with Lunamunt. This dual advantage fosters an ecosystem where the success of the community translates to the success of the project itself, creating a win-win situation for all stakeholders.

Token Information

Lunamunt is a BEP-20 token that uses the SafeMath library to ensure that all calculations are accurate and secure. It has a total supply of 100,000,000,000 tokens, and the creators have implemented a maximum wallet amount of 1% of the total supply to prevent any one person or group from owning too many tokens. The token is also deflationary, with a burn fee of 1% for every buy and sell transaction.

The creators have also implemented a number of features to prevent market manipulation and ensure fair trading. There are limits on the size of buy and sell transactions, and there is a block on multiple buys. Additionally, there are fees associated with buying and selling Lunamunt that are designed to reward long-term holders and discourage short-term traders.

TOKENOMICS:

TOTAL SUPPLY: 100 Billion

- **NO BURN AT LAUNCH**
- **NO PRIVATE SALE**
- **NO PRESALE**

LIQUIDITY: 1 BNB

- Lunamunt token has a fixed liquidity pool of 1 BNB.
- The value of the liquidity pool will fluctuate depending on market demand.

FUTURE DEV. AND CEX: 3%

- 3 billion Lunamunt tokens are set aside in a dev wallet for future development and possible exchange listing.

INITIAL CIRCULATING SUPPLY: 97 Billion send to the contract

MAX WALLET & MAX TRANSACTION: 1%

- The maximum wallet and transaction size for Lunamunt token is limited to 1% of the total supply.

Lunamunt uses a number of different fees to incentivize different behaviors and distribute rewards to holders. These fees include:

LUNARewards buy and sell fees of 2%
LUNABurn buy and sell fees of 2%
Marketing buy and sell fees of 3%
Burn buy and sell fees of 1%
Liquidity buy and sell fees of 2%

The total buy fees add up to 10%, while the total sell fees add up to 10%. These fees are used to distribute rewards to holders and provide liquidity for the token.

These tokenomics ensure that the project is fair and transparent, with no preferential treatment given to early investors or developers. The liquidity pool is set at 1 BNB initially, which allows for a stable launch and minimizes the risk of price manipulation.

The 3% allocation for future development and CEX ensures that the project has sufficient resources to continue improving and expanding. This allocation can be used for development of new features, hiring of additional team members, and potential exchange listings to increase liquidity and exposure.

The maximum wallet and transaction limits help to prevent whales from dominating the market and ensure a more equitable distribution of tokens among investors.

Overall, these tokenomics are designed to create a sustainable and successful project that benefits both investors and the project itself.

Roadmap:

The roadmap is simple and focused on achieving the following objectives:

- Burning LUNC tokens to help lowering the supply
 - RewardLunamunt in LUNC / Lunamunt
- Getting listed on CoinMarketCap and CoinGecko
- Growing the community on Twitter via different social media channels and outlets

It's important to note that there are no guarantees in the crypto market, as it can be volatile. However, the team's focus remains on achieving these objectives.

If there are any future plans for the project, they will be added to the website in the roadmap section. This ensures transparency and keeps the community informed about the project's progress.

Contract Audit:

Our contract has undergone a comprehensive audit by PinkAudit.AI, which has approved it without any issues. We will conduct further audits soon to ensure the highest level of security and transparency.

LP Lock & Token Security:

We take the security of our investors very seriously. To that end, we have initially locked the liquidity provided at launch for one year. Additionally, our contract auto-generates 1% liquidity with every transaction.

Transparency & Security:

We have implemented multiple layers of security and transparency to provide peace of mind to our investors. Our contract ownership, marketing, and burn wallets are all multisignature protected.

Binance Smart Chain:

Given the low gas fees and Binance holding the majority of the Luna Classic supply, we have chosen to launch on the Binance Smart Chain.

Conclusion

Lunamunt is a decentralized cryptocurrency that uses a number of different features to promote fair trading and reward long-term holders. The token is deflationary and uses a custom dividend tracker to distribute rewards to holders. It also uses a marketing wallet and a burn wallet to promote the token and reduce the supply over time. With its unique tokenomics and focus on stability and security, Lunamunt is a promising investment opportunity for individuals interested in the cryptocurrency market on the Binance Smart Chain.
